Project Two for DBS: Selecting Courses

Project Two (Individual):

You are asked to Design and implement an DB-based partial application system on Teaching Administration Management, and mainly implement Select-Courses with necessary helper features (view selectable courses and selected courses, adjust selected courses etc.), considering the following constraints: prerequisite courses, credit limit (no more than 21 credits in one semester), and no time conflicts for selected courses. No any tools restriction.

If you had chosen the IAD course in this semester, you may just finish the same project for two courses.

E-archives:

./src: All the resources including code and other asset files.

./run: Runnable files of your application.

./doc: Concise usage guideline documents.

Email to 1920603969@qq.com Before Dec. 15, 2024.
